

Assignment On Functions And Conditional Statements

1. Write a function `greet()` that prints "Hello, welcome to JavaScript!" and call it.
 2. Create a function `calculateArea(length, width)` that returns the area of a rectangle.
 3. Write a function `isEven(num)` that returns `true` if the number is even, else `false`.
 4. Create a function `factorial(n)` that returns the factorial of a given number.
 5. Create a function `isPrime(num)` that checks if a number is prime.
-

1. Write a function expression `greetUser` that takes a name and logs "Hello, <name>".
 2. Create a function expression `square` that returns the square of a number.
 3. Define a function expression that calculates the sum of digits of a number.
 4. Write a function expression `reverseString` that returns the reversed string.
 5. Define a function expression `isPalindrome` to check if a string is a palindrome.
-

1. Create an arrow function `addNumbers` that takes two parameters and returns their sum.
 2. Create an arrow function `findMax` that returns the maximum of three numbers.
 3. Write an arrow function `isVowel` that returns `true` if a character is a vowel.
 4. Write an arrow function `fibonacci(n)` that returns the first `n` numbers of the Fibonacci sequence.
 5. Create an array of user objects and sort them by username using arrow function and `.sort()`.
-

1. Write a function `checkEligibility(age)` using `if-else` to determine if a person can vote ($\text{age} \geq 18$).
2. Create a function `grade(marks)` that returns a grade (A, B, C, etc.) based on marks using `else if`.
3. Write a function `getDayName(dayNumber)` using a `switch` to return the name of the day (1 = Monday, ... 7 = Sunday).
4. Write a function `isLeapYear(year)` that uses conditional logic to check for leap year.
5. Create a function `calculateBill(units)` to calculate electricity bill based on slab rates:
 - Up to 100 units: ₹5/unit
 - 101-200: ₹6/unit
 - 201+: ₹7/unit
