

CSS Position Practical Questions

Level 1 – Basics

1. Create three `<div>` boxes and display them in normal flow. Apply `position: static` (default) and observe.
 2. Place a box at the **center of the page** using `position: absolute`.
 3. Move a heading `<h1>` 50px to the right and 20px down using `position: relative`.
 4. Create a button that stays at the **bottom-right of the page** using `position: fixed`.
 5. Make a `<div>` that sticks to the **top of the page only while scrolling its section** using `position: sticky`.
-

Level 2 – Intermediate

6. Build a card layout with 3 cards. Place a **"New" tag** on the top-right of the first card using `position: absolute`.
 7. Create a navigation bar that stays **fixed at the top** when scrolling. Add some dummy content below it.
 8. Place an image inside a container and overlay some **text at the bottom-left corner** using `absolute` positioning.
 9. Create a chat-like button that always stays **fixed at the bottom-right corner** of the screen.
 10. Design a sticky header that **sticks while scrolling** but stops when the next section reaches the top.
-

Level 3 – Advanced / Real-World

11. Create a parent container with 4 child boxes. Place one box at each corner using `position: absolute`.
 12. Make a layout with a **relative parent container**. Inside it, position one child absolutely at the center.
 13. Build a profile card with:
 - Profile image (absolute at top-center of the card).
 - Name & details below it (relative).
 - A small badge like "Pro" at the top-right (absolute).
 14. Create a sidebar that stays fixed on the left, while content scrolls on the right.
 15. Make a **sticky table header**: when scrolling a long table, the header row should stay visible.
