

📖 Assignment: CSS Basic Selectors with Styling

Element Selector Problems

1. Write CSS to change the text color of **all paragraphs** `<p>` on the page to **blue**.
 2. Select all `<h1>` headings and make their text **red** and **center aligned**.
 3. Select all `<h2>` elements and change their font size to **24px**.
 4. Change the text color of all `<a>` (links) to **green** and remove the underline.
 5. Select all list items `<li>` and give them an **orange background color**.
-

ID Selector Problems

1. Select the element with `id="title"` and make the text color **purple**.
 2. Select the element with `id="footer"` and give it a **light gray background**.
 3. Select the element with `id="page-header"` and align its text to the **center**.
 4. Select the element with `id="slogan"` and make its text **italic**.
 5. Select the element with `id="navbar"` and increase its font size to **20px**.
-

Class Selector Problems

1. Create a CSS class named `.highlight` and apply a **yellow background** to any element using this class.
2. Create a CSS class `.note` and make all text with this class **dark blue**.

3. Create a class `.center` that aligns the text of all elements with this class to the **center**.
 4. Create a class `.title` that makes text **bold** and apply it to some headings.
 5. Create a class `.quote` that makes text **italic** and change its color to **gray**.
-

Universal Selector Problems

1. Use the universal selector (*) to change the **font-family** of the entire webpage to **Arial**.
 2. Use the universal selector to make the text color of **all elements black**.
 3. Apply universal selector to set the **font size** of all elements to **16px**.
 4. Use the universal selector to change the **background color** of the whole page to **lightgray**.
 5. Use the universal selector to align all text to the **left**.
-

Grouping Selector Problems

1. Write CSS to make both `<h1>` and `<h2>` text **green**.
 2. Apply the same text color **brown** to `<p>` and `<li>` using grouping selector.
 3. Align the text of both `<h3>` and `<h4>` to the **center**.
 4. Write CSS to give `<h1>`, `<h2>`, and `<h3>` the same **red background color**.
 5. Apply the same **blue text color** and **20px font size** to all headings (`h1`, `h2`, `h3`, `h4`, `h5`, `h6`).
-
