10. Which method is compulsory in a React class component?

- a) show()
- b) display()
- c) render()
- d) print()

11. What is the correct syntax for applying inline CSS in JSX?

- a) `<div style="color:red">Hello</div>`
- b) `<div style={{color:'red'}}>Hello</div>`
- c) `<div style={color:'red'}>Hello</div>`
- d) `<div style=color:red>Hello</div>`

12. What will the following code print?

```
let x = 5, y = 10;  
<h2>{x + y}</h2>
```

- a) `x + y`
- b) 15
- c) `{x + y}`
- d) Error

13. Identify the invalid JSX syntax:

- a) `<h1>{10 * 2}</h1>`
- b) `<p style={{color:'blue'}}>Hello</p>`
- c) `<h2>{if(true) "Yes"}</h2>`
- d) `<div>{name}</div>`

14. Which is the correct way to define a React functional component?

a)

```
function App() {  
  return <h1>Hello</h1>;  
}
```

b)

```
function app() {  
  return <h1>Hello</h1>;  
}
```

c)

```
App() {  
  return <h1>Hello</h1>;  
}
```

d)

```
function App() <h1>Hello</h1>;
```

15. Which lifecycle method is used to return JSX from a class component?

a) render()

b) return()

c) componentDidMount()

d) show()

16. Props in functional components are accessed through:

a) this.props

b) props argument

c) state

d) data()

17. What is the correct import statement for class components?

- a) `import React from "react";`
- b) `import { Component } from "react";`
- c) `import Class from "react";`
- d) `import Component from "react-class";`

18. How do you pass a number prop in JSX?

- a) `<Student age="21" />`
- b) `<Student age={21} />`
- c) `<Student {age:21} />`
- d) `<Student age=(21) />`

19. Identify valid JSX output from this code:

```
function Message(props) {  
  return <h2>Hello, {props.name}</h2>;  
}
```

and usage:

```
<Message name="Ravi" />
```

- a) Hello, props.name
- b) Hello, Ravi
- c) {props.name}
- d) Error

20. Which statement is **true** about React Components?

- a) Class components cannot return JSX.
- b) Functional components cannot use props.
- c) Components must return only one root element.
- d) JSX can return multiple sibling tags.

Part B: Problem Statements

Q1. Functional Component – Basic

Create a functional component `Home` that displays a heading “Welcome to React Functional Component”.

Q2. Display Variable Value

Create a functional component that defines a variable `courseName = "ReactJS"` and prints it inside JSX using `{}`.

Q3. Inline CSS Styling

Create a `<div>` with text “**React Inline Styling Example**” and apply inline styles for:

- `color: blue`
 - `fontSize: 30px`
 - `textAlign: center`
-

Q4. Class Component Example

Create a class component `Demo` that displays a message “This is a Class Component” using the `render()` method.

Q5. Component Composition

Create three functional components — `Header`, `Body`, and `Footer`.
Render them together inside the `App` component to form a webpage layout.

Q6. Props Example

Create a component `Profile` that takes props:
`name` and `age`
and displays — “My name is [name] and I am [age] years old.”

Q7. Dynamic Inline Style

Define a variable `let isActive = true;`
Display text “Active” in green if true, otherwise “Inactive” in red using inline styles.

Q8. Product Card

Create a `Product` component that displays product name, price, and an image using inline CSS for styling.

Q9. Props with Multiple Components

Create a component `Student` that accepts `name` and `marks` as props.
Render three `Student` components with different data in `App`.

Q10. Simple React UI

Create a small webpage with JSX that displays:

- Website title
 - Tagline paragraph
 - “Click Me” button
- Apply inline CSS for layout and color formatting.
