

React Assignment: useEffect Hook

Part A – Multiple Choice Questions

1. The `useEffect` hook in React is primarily used for _____.

- a) Returning JSX elements
 - b) Handling side effects
 - c) Updating the DOM directly
 - d) Declaring state variables
-

2. The correct syntax for `useEffect` is:

- a) `useEffect(callback)`
 - b) `useEffect(callback, dependencies)`
 - c) `useEffect(callback, [])`
 - d) All of the above
-

3. Which of the following is **not** a side effect in React?

- a) Fetching API data
 - b) Updating state
 - c) Setting up an interval
 - d) Accessing browser storage
-

4. When you pass an empty dependency array `[]` to `useEffect`, it runs _____.
a) On every render
b) Only once after initial render
c) Every time the state changes
d) Never
-

5. The cleanup function inside `useEffect` is used for _____.
a) Returning JSX
b) Setting new state values
c) Removing unwanted side effects
d) Adding dependencies
-

6. What happens if you omit the dependency array in `useEffect`?
a) The effect runs only once
b) The effect never runs
c) The effect runs after every render
d) The effect throws an error
-

7. What is the correct way to clean up a timer in `useEffect`?
a) `return clearTimeout(timer)`
b) `return () => clearTimeout(timer)`
c) `clearTimeout(timer)` outside effect
d) No need to clean it up
-

8. What does React do before running an effect again?
a) Ignores the previous effect
b) Re-renders immediately
c) Runs the cleanup function from the previous effect
d) Does nothing

9. In this code, when will `useEffect` run?

```
useEffect(() => {  
  console.log("Effect ran");  
}, [count]);
```

- a) Only once
- b) Whenever `count` changes
- c) On every render
- d) Never

10. You can use multiple `useEffect` hooks in a single component.

- a) True
- b) False

11. What happens if you use state updates inside `useEffect` without dependencies?

- a) State updates once
- b) React ignores it
- c) Causes an infinite re-render loop
- d) Runs only on unmount

12. The cleanup function inside `useEffect` runs when:

- a) Component mounts
 - b) Component updates
 - c) Component unmounts
 - d) Both (b) and (c)
-

13. The `useEffect` hook executes its callback:

- a) Before rendering the component
 - b) During rendering
 - c) After rendering (commit phase)
 - d) Before state initialization
-

14. Which of the following is a valid dependency array?

- a) `[count, user]`
 - b) `{count, user}`
 - c) `(count, user)`
 - d) `<count, user>`
-

15. If two dependencies are listed in the array, when does the effect re-run?

- a) Only when both change
 - b) When any one of them changes
 - c) When none change
 - d) Randomly
-

16. What does React warn if you forget to include a dependency in the array?

- a) Nothing
 - b) Runtime error
 - c) “Missing dependency” warning in console
 - d) Stops component rendering
-

17. What happens if you update state in `useEffect` but do not clean up old timeouts?

- a) React handles cleanup automatically
- b) Multiple timers run simultaneously
- c) Timer stops working
- d) State resets

18. The cleanup function is optional in `useEffect`.

- a) True
- b) False

19. Which hook should you use for running logic when a component **mounts** and **unmounts**?

- a) `useState`
- b) `useReducer`
- c) `useEffect`
- d) `useRef`

20. What is the default behavior of `useEffect` if no second argument is given?

- a) It runs once
- b) It never runs
- c) It runs after every render
- d) It runs before the component mounts

Part B – Problem Statements

Automatic Counter

Create a component named `AutoCounter` that starts counting from 0 and increases by 1 every second using `setInterval` inside `useEffect`. Add a cleanup function to clear the interval when the component unmounts.
