

Throw Keyword in Java:

1. Throw keyword is used for generating the custom exception.
2. Custom exception means our own exception.
3. The throw keyword in java is used for explicitly throwing a single exception. This can be from within a method or any block of code.
4. Using throw keyword, we can throw either checked or unchecked exceptions in java programming.

Syntax of Throw Keyword:

The throw syntax in java which is given below –

```
throw throwableObject;
```

A throwable object can be an instance or subclass of the Throwable class. All exceptions defined in java are subclasses of Throwable.

Throws Keyword	Throw Keyword
Throws keyword always used with method signature.	Throw keyword are always present inside the method body.
We can handle multiple exceptions using the throws keyword.	We can throw only one exception at a time.
Throws is followed by class.	Throw is followed by an instance.
Throws key-word is used to declare an exception.	Throw key-word is used to explicitly throw an exception.
