WORK WITHOUT INHERITANCE IN JAVA: -

A.java

```
public class A
{
    public void m1()
    {
        // take at least one statement inside the method
    }
    public void m2()
    {
        // take at least one statement inside the method
    }
}
```

B.java

```
public class B
{
```

CJC
Complete Java Classes

```
public void m3()
{
    // take one statement inside the method
}

public void m4()
{
    // take one statement inside the method
}
}

Test.java

public class Test
{
    public static void main(String args[])
    {
        A a = new A();
        // Call the methods here which is belong from A class
        B b = new B();
        // Call the methods here which is belong from B class
    }
}
```
