Complete Java Classes

by Kunal Sir

Narrowing Concept in Java:

1. When the value is applicable for multiple overloaded method.
2. Where the value is applicable that class should have parent and child relationship.
3. Then according to the narrowing concept child class parameter will get call.

Understanding Program:

Example-1:

```
public class A
{
    public void m1(String s)
    {
        System.out.println("m1- String");
    }
}
```

CJC

Complete Java Classes

by Kunal Sir

```
public void m1(Object o)
{
    System.out.println("m1-Object");
}
}
```

```
public class Test
{
    public static void main (String [] args)
    {
        A a = new A ();
        a.m1 (null);
    }
}
```

Example-2:

```
public class A
{
    public void m1(A o)
    {
```

Complete Java Classes

by Kunal Sir

```
        System.out.println("m1- A");
    }
    public void m1(String s)
    {
        System.out.println("m1-String");
    }
}

public class Test
{
    public static void main (String [] args)
    {
        A a = new A ();
        a.m1 (null); //incorrect
        a.m1 ((A) null);
        a.m1 ((String) null);
    }
}
```
