

LIST (COLLECTION FRAMEWORK) TASK: -

List of tasks related to List (Collection)–

Question 1. Solve the below program?

public class Student

```
{  
    private int rollno;  
    private String name;  
    private String addr;  
        long mobilenos;  
        double clgfees;  
        float marks;  
        String clgname;
```

```
// by Setter and Getter Methods
```

```
}
```

public class Test

```
{
```

```
main()
{
    //set(by using Scanner and list) and get(by using Iterator
    and Enhanced for loop) your data here

    Student s=new Student();

    Student s1=new Student();

    Student s2=new Student();
}
```

Question 2. Solve the below program?

```
public class Empolyee
{
    private int id;
    private String ename;
    private double esalary;
    private String addr;
    private long mb;
    private String designation;
    private String gender;
```

CJC
Complete Java Classes

//by Setter and Getter Methods

}

public class Test

{

// Store 5 Employee data into ArrayList and retrieve the data by using Iterator and Enhanced For Loop.

}

Question 3. Solve the below program?

public class Address

{

private String areaname;

private String cityname;

// by Setter and Getter methods

}

public class Student

{

private int rollno;

CJC
Complete Java Classes

```
private String sname;  
private String gender;  
private long mobileno;  
private double clgFees;  
private Address addr;  
}
```

```
public class Test
```

```
{  
    // 5 object Create  
    //Create object of Address and Student class  
    //and store Student object into ArrayList and retrieve the data  
    by using Iterator and Enhanced forloop  
}
```

Question 4. Solve the below program?

```
public class Address
```

```
{  
    private String areaname;
```

CJC
Complete Java Classes

```
private String cityname;  
private int pincode;  
//by using Setter and Getter methods  
}
```

```
public class College
```

```
{  
private String clgname;  
private int clgid;  
Address address;  
//by using Setter and Getter methods  
}
```

```
public class Student
```

```
{  
private int rollno;  
private String sname;  
private String gender;  
private long mobilenno;  
private double clgFees;
```

CJC
Complete Java Classes

College college

}

public class Test

{

// 5 object Create

//create object of Address and Student class and college

//and store Student object into Array-List

//using scanner through

// and iterate the data

}

THANK YOU
