

Level 1 – Basic (Using simple `if` statement)

1. Check Login Status

Create a variable `isLoggedIn`.

If `isLoggedIn` is `true`, print "Welcome back, user!".

2. Check Positive Number

Write a program that checks if a number is positive.

If it's positive, print "The number is positive.".

3. Temperature Alert

If the temperature is above 35°C, display "Heat Alert! Drink more water.".

Level 2 – Using `if-else` Statement

4. Even or Odd Checker

Take a number from the user.

If it's even, print "Even number", else print "Odd number".

5. Voting Eligibility

Check if a person's age is 18 or above.

If yes, print "Eligible to vote", else "Not eligible to vote".

6. ATM Withdrawal System

If the balance is greater than or equal to the withdrawal amount, print "Transaction Successful".

Else print "Insufficient Balance".

Level 3 – Using `else-if` Ladder

7. Student Grade Evaluation

Based on percentage marks:

- 90–100 → "Grade A"
- 75–89 → "Grade B"
- 60–74 → "Grade C"
- below 60 → "Fail"

8. Electricity Bill Calculation

Based on units consumed:

- <100 units → ₹5/unit
- 100–200 units → ₹7/unit
- 200 units → ₹10/unit

Display total bill amount.

9. BMI (Body Mass Index) Category

Input BMI value and classify as:

- <18.5 → "Underweight"
- 18.5–24.9 → "Normal Weight"
- 25–29.9 → "Overweight"
- ≥30 → "Obese"

Level 4 – Using `switch` Statement

10. Day Finder

Input a number (1–7).

Use a switch statement to print the day name (e.g., 1 → Monday, 7 → Sunday).

11. Restaurant Menu Card

Input a food name and use `switch` to print the price:

- "Pizza" → ₹250
- "Burger" → ₹150
- "Pasta" → ₹200
- Default → "Item not available"

12. Course Fee Management System

Input course name (Java, Python, React).

Use `switch` to print course fees:

- "Java" → ₹27000
- "Python" → ₹25000
- "React" → ₹10000
- Default → "Invalid course selected"

Level 5 – Combined Conditional Logic (Realistic Scenarios)

13. Online Shopping Discount System

Take total purchase amount from the user and apply discounts:

- $\geq ₹5000$ → 20% discount
- ₹2000–₹4999 → 10% discount
- $< ₹2000$ → No discount

Print the final amount after discount.

14. Employee Salary Bonus Calculator

Based on years of experience:

- 10 years → 20% bonus
- 5–10 years → 10% bonus
- < 5 years → 5% bonus

Print total salary after adding bonus.

15. Movie Ticket Pricing System

Input age and movie type:

- Age < 12 → ₹100
- Age 12–60 → ₹200
- Age > 60 → ₹150

Then check movie type:

- "3D" → add ₹50 extra
- "2D" → no extra cost

Use nested `if` conditions to print total price.

16. Travel Fare Calculator

Based on travel distance (in km):

- $<50 \rightarrow ₹8/\text{km}$
- $50-100 \rightarrow ₹6/\text{km}$
- $100 \rightarrow ₹5/\text{km}$

Also, if it's "Night time", add 10% extra charge.

17. Student Result Management System

Take marks of 3 subjects.

- Calculate average.
- If $\text{average} \geq 90 \rightarrow \text{"Excellent"}$
- If $75-89 \rightarrow \text{"Very Good"}$
- If $60-74 \rightarrow \text{"Good"}$
- If $40-59 \rightarrow \text{"Pass"}$
- Below 40 $\rightarrow \text{"Fail"}$

Use else-if ladder.
