Function Declaration Assignments

Task 1:

Create a function named `helloUser` that prints a welcome message to the console. Then, call the function to display the message.

Task 2:

Create a function named `CheckEvenNumber` that takes an integer as input and prints whether the number is even. Call the function with a sample number.

Task 3:

Create a function named `findSquare` that takes a number as input and prints its square. Call the function with a sample value.

Task 4:

Create a function named `printTwoTable` that takes a number and prints its multiplication table from 2 to 20. Call the function with a sample number.

Function Expression Assignment

Task 1:

Create a JavaScript function expression named `helloUser` that prints a welcome message to the console. Assign the function to a variable and then call it to display the message.

Task 2:

Create a function expression named `CheckEvenNumber` that accepts an integer and prints whether the number is even. Assign the function to a variable and call it with a sample number.

Task 3:

Write a function expression named `findSquare` that takes a number as input and

prints its square. Assign the function to a variable and call it with a sample value.

Task 4:

Write a function expression named `printTwoTable` that takes a number and prints its multiplication table from 2 to 20. Assign the function to a variable and call it with a sample number.

Arrow Function Assignment

Task 1:

Create a JavaScript arrow function named `helloUser` that prints a welcome message to the console. Assign the function to a variable and call it to display the message.

Task 2:

Create an arrow function named `CheckEvenNumber` that accepts an integer and prints whether the number is even. Assign the function to a variable and call it with a sample number.

Task 3:

Write an arrow function named `findSquare` that takes a number as input and prints its square. Assign the function to a variable and call it with a sample value.

Task 4:

Write an arrow function named `printTwoTable` that takes a number and prints its multiplication table from 2 to 20. Assign the function to a variable and call it with a sample number.

Callback Function Assignment

Task 1:

Create a function named `helloUser` that prints a welcome message. Then, create another function named `runCallback` that accepts a callback and executes it. Pass `helloUser` as a callback to `runCallback`.

Task 2:

Create a function named `CheckEvenNumber` that checks if a number is even. Then, define a function named `evaluateNumber` that takes a number and a callback, and uses the callback to check the number.

Task 3:

Write a function named `findSquare` that returns the square of a number. Create another function named `applyMath` that accepts a number and a callback, and uses the callback to process the number.

Task 4;

Write a function named `printTwoTable` that prints the multiplication table of a number from 2 to 20. Create another function named `generateTable` that accepts a number and a callback, and uses the callback to print the table.
