Environment Setup For The React

1. NodeJS: -

NodeJS is open-source JavaScript, cross platform runtime environment, it allows us compile and run JavaScript code out-side the browser. It comes along with its child software.

A) NPM: -

node package manager acts as central repository for softwares and libraries (same as maven) we can install as well as download them using npm commands. NPM also have its child software called NPX.

Ex. npm install/uninstall bootstrap

a) NPX: -

node package executor is a child software of NPM and it execute the NPM softwares/libraries without install them on local machine.

Ex. npx create-react-app project_name

Link to install NodeJS: <https://nodejs.org/en/download/prebuilt-installer>

Check nodejs/npm/npx versions on cmd:

```
C:\Users\prati>node -v  
v20.13.1
```

```
C:\Users\prati>npm -v  
10.8.0
```

```
C:\Users\prati>npx -v  
10.8.0
```
